The Hungarian building sector

In the period of 2011-2014 building constructions fell on average 10%, and though public works were also more dynamic over the past two years, the number of the two main groups in the building industry almost evened out by 2014.

In the building industry sector, which accounts for about three quarters of construction sector, specialized construction - mostly installation and finishing works - grew more, as it has been the crisis period of the construction industry, primarily due to residential energy consumption.
